Steps:

1) The good ones and the expired ones are seperated at first, so it's for you to remember which one is good, or bad.
2) Shelf closed. Food are mixed. and shelf reopened.
3) Choose one dogs food and drag it in front of BanBan, he will automatically eat it .

Climax: i) If he eats the good one. He can do some commands (eg.sit, roll over, high5 etc.)
ii) If he eats the bad one. He will throw up and be sick.

Inspiration:

My inspiration originally comes from my dog Banban. I have kind of mixed dogs food at home. Some are expired. I accidentally gave him the expired one, and he threw up 10mins after he ate it.
So I was thinking this could be an interation for dogs lovers. To warn you to remember checking the expiration date of your pet's food and keep your pet healthy! :D
