Ciani Holdman
Midterm Project Proposal
PUDT 1203 Creative Computing
March 12, 2013

For the midterm I would like to create an interactive narrative that shows the skills that I have learned, so far, from this class and also to challenge myself so that I can make a successful and working code program.

The first scene takes place in a child's bedroom where there is a toy chest leaned against the wall and a Mr. Potato Head on the floor with all of its pieces missing. The user must click the specific items inside of the toy chest in order to put the Mr. Potato Head back together. Once reassembled, click the arrow at the bottom right corner of the screen to proceed through the story. In later scenes, the user will face a couple obstacles, forcing them to build tools that will help will them continue on.

- In every scene there will be interactivitiy with the user.
- Items in the bedroom, such as the toys, lights, and more will be interactve as the mouse arrow hovers over or presses on things.

Inspiration:

Functions:

- PImage
- void draw
- if statements
- countdown
- mouseX, mouseY
- boolean
- mousePressed
- mouseClicked
